TECHNICAL RESEARCH

Introduction

Our project focuses on developing a material master data management solution using SAP ABAP. This program will allow for efficient creation, modification, and management of material data, integrating Excel-based uploads and downloads to streamline bulk data handling. By enhancing data accuracy and accessibility, the project will support key business operations across procurement, inventory, and production.

Customers:

FPT Software Advisors

Supervisors:

Nguyễn Thế Hoàng

Nguyễn Ba Lê

Team Members

Trần Thanh Phong
Developer - Leader

Suggested Research Question

1. What is material master data?
2. What information is needed for the material code of the Electronics industry?
3. To create/edit/delete, what information in the master data will be restricted from changing?
4. Learn how to create material codes without going through the standard Tcode MM01.
5. Learn how to upload excel to SAP, download excel, alv oop.

Workshop Schedule

01 **SEPTEMBER 16, 2024 (MONDAY)**

- Material Basic Data, Data Template
- Organization Structure: Purchasing Org., Company code, Plant, Storage Location.
- Flowchart: Upload Template, Extend Data, Check Logic, Create, Change.
- Sample Data

02 **SEPTEMBER 20, 2024 (FRIDAY)**

- Organization Chart
- Flowchart: I/O, Duplicate check, validate fields,..
- Material Variant Management: Classification & Batch
- Mapping Fields

Material Master Data

- Contains all the information necessary for managing materials in the system (name, UOM, etc.)
- Serving functions such as production, purchasing, sales, inventory management, accounting,...
- Each material has a unique identifier: Material Number.

Material Master Data

Material Master

General Data

Data applicable throughout the client
e.g.
Material number
Description
Units of measure
Weight
Volume
Product hierarchy

Sales Specific Data

Data dependent on sales organization and distribution channel
e.g.
Delivering plant
Sales text
Sales units
Shipping data
Division

Plant Specific Data

Data relevant for planning and production
e.g.
MRP profile
Production costs
Planning data
Valuation

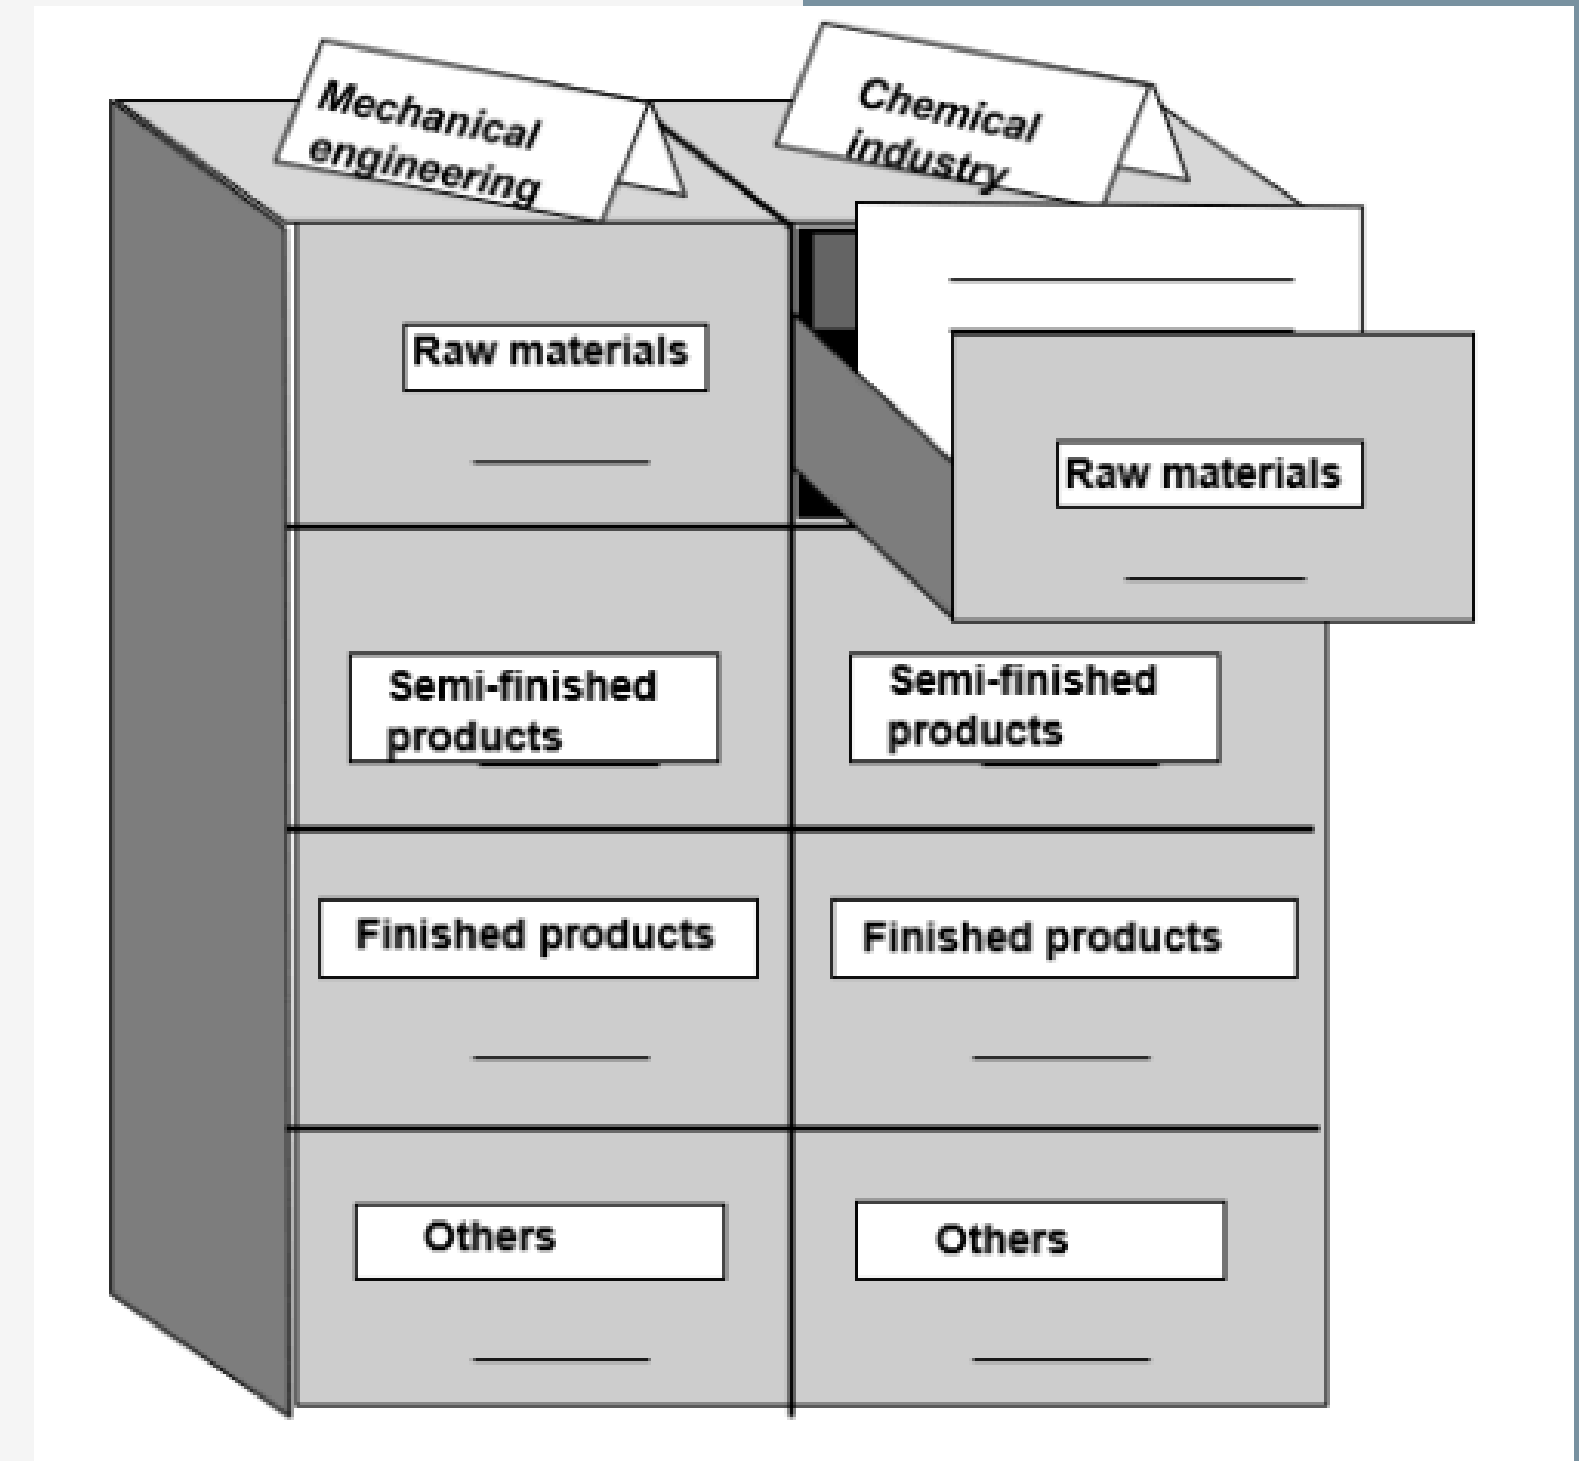

St. Loc. Specific Data

Data referring to storage and inventory management
e.g.
Quantities
Special stock
Warehouse attributes

Material Type

- Materials with some common attributes are grouped together and they are assigned to a material type.
- Allow organization to manage different materials in systematic manner in accordance to company's requirement

View of the Material Master

Trading Goods - HAWA

- These materials are **procured** externally and **sold** as-is to customers, without undergoing any internal production processes.
- Companies that deal in trading goods mainly act as **distributors** or **retailers**.

Classification

Classification allows you to associate characteristics with objects: quality, type, industry classification, or any other information related to that object.

Advantages:

- Easy search: based on material properties
- Integration with other processes: linked to many processes: material management, customer management, and supplier management.

Classification in SAP

Customizing Characteristics

T-code: CT04. You can define attributes such as production date, expiry date, weight, batch number, and many other information.

Associating Classification with objects

You can associate classes and attributes with objects such as materials, customers, or suppliers. For example, you can associate quality information with a specific batch of material.

Customizing Classes

After creating attributes, you will group them into classes. T-code CL02 is used to create and manage classes. Each class can contain many attributes.

Material Classification

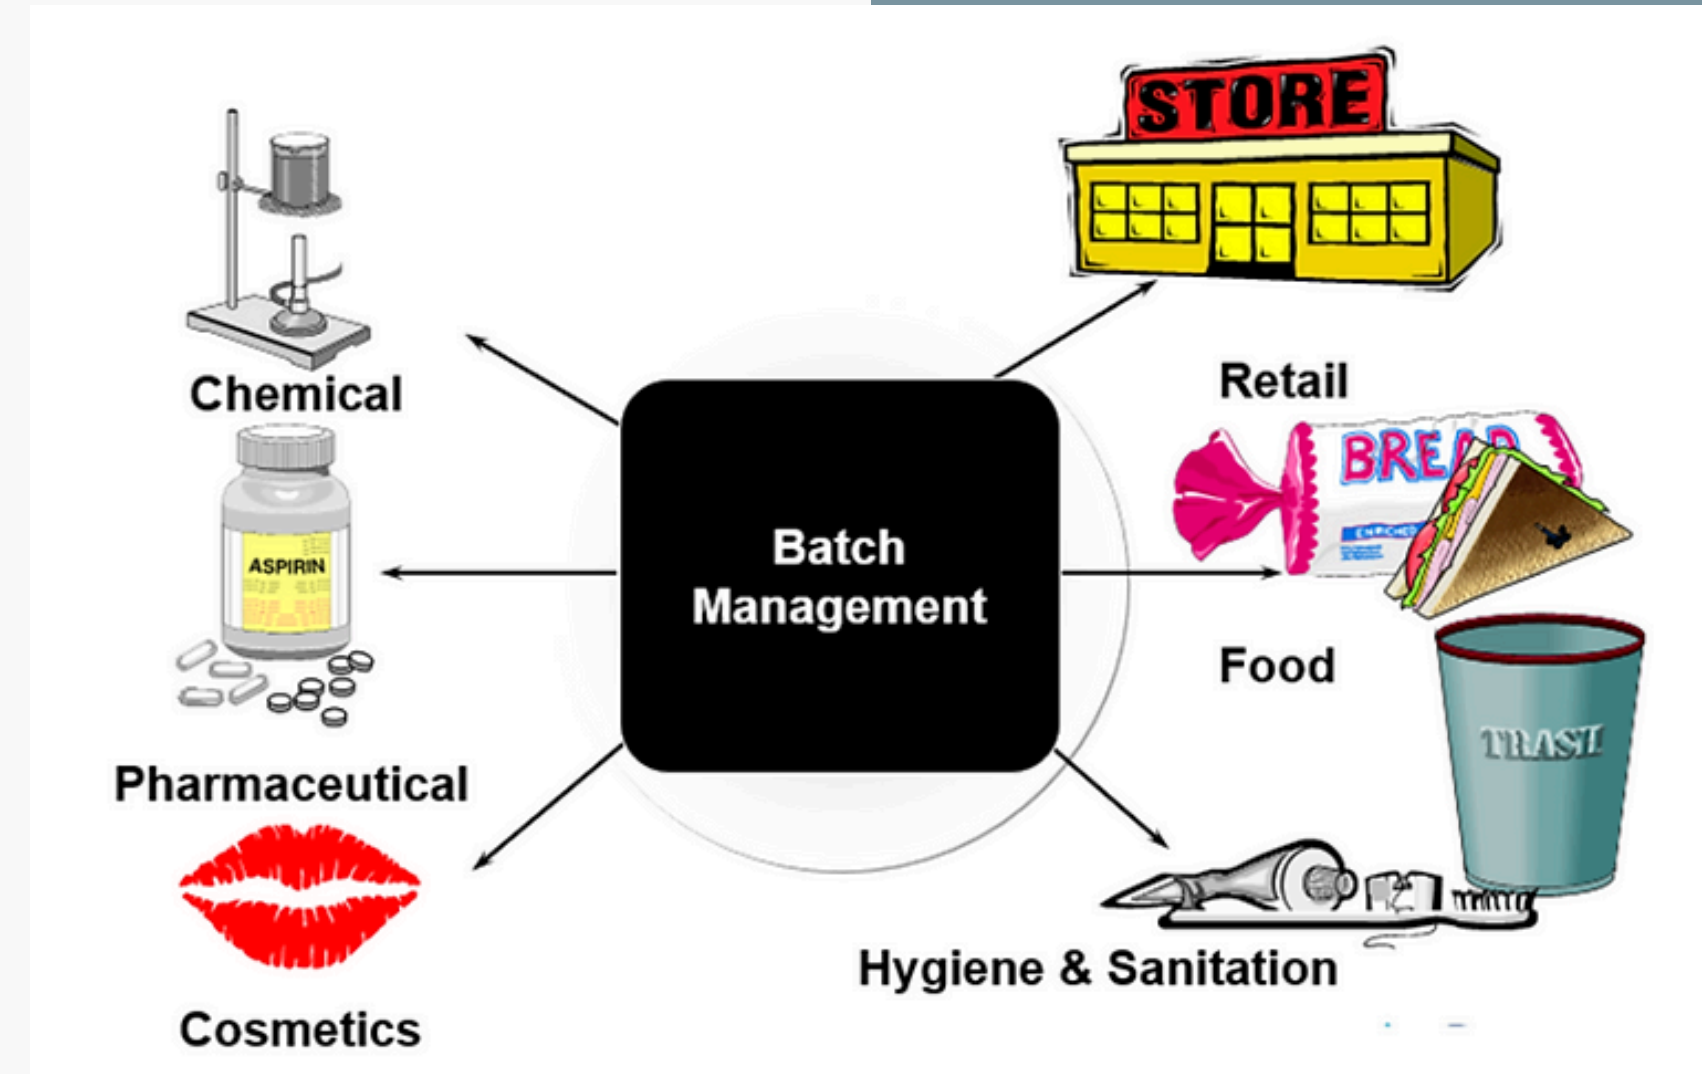

Similarly, you can classify materials based on attributes such as material type (raw material, finished product), material group, or specification

Batch Management

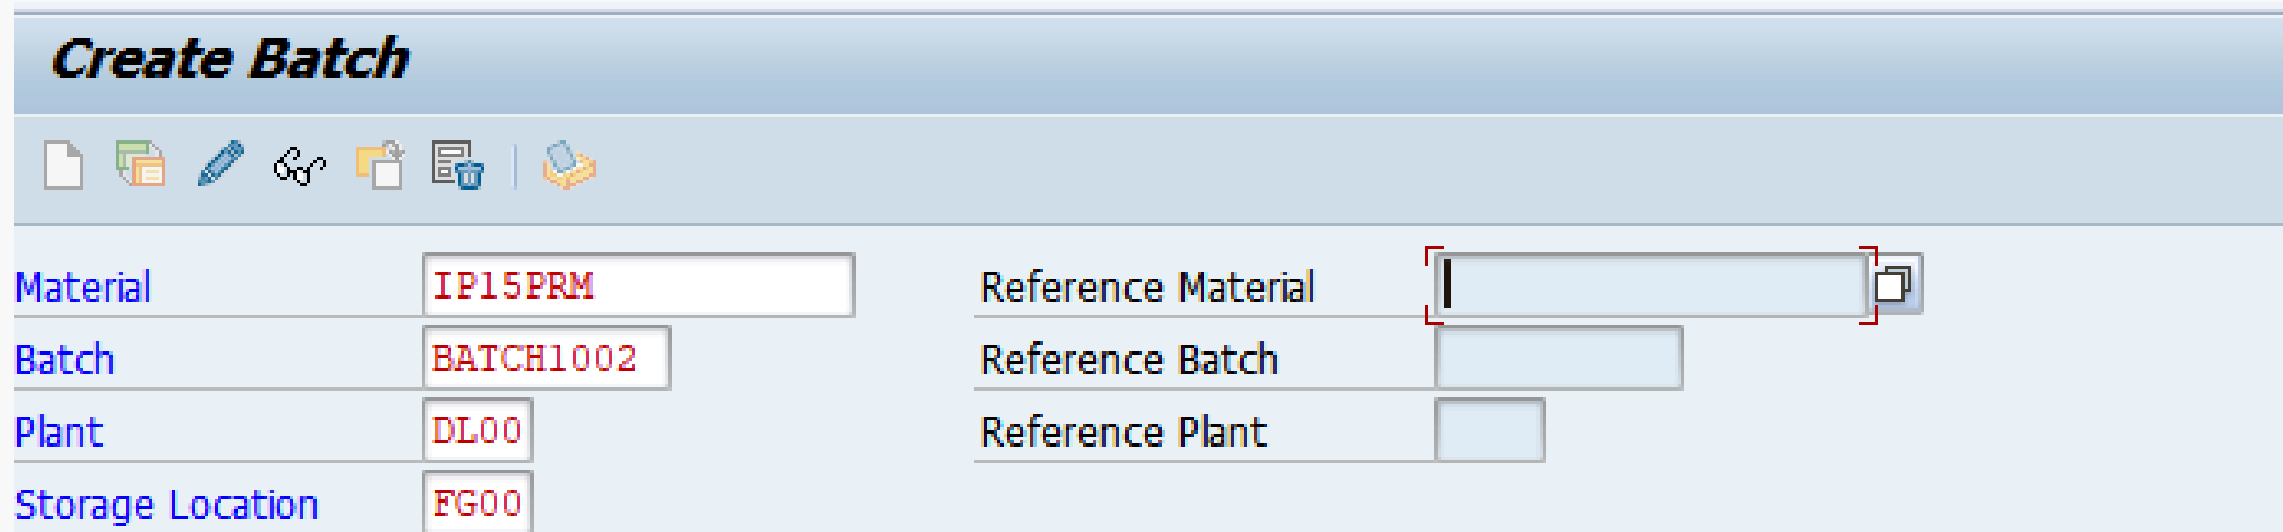

- Each batch has common characteristics, such as production date, origin, or quality parameters.
- Batch helps maintain accurate information about production, expiry dates,...

Key Point about Batch Management:

- Enabling Batch Management: To manage materials in batches, you must enable batch management in the material master record.
- Batch Number Assignment: Each batch is identified by a unique batch number. This batch number can be assigned manually or automatically assigned by the system.

Batch Management in SAP

Create Batch
