#### 2 USER MANUAL

#### 2.1 Overview

The purpose of the upload flow is to provide a function for users to create and extend materials by downloading an Excel template containing the required data and uploading material data via Excel files simply and effectively. Besides, the function allows users to switch between installed languages by downloading a template file to fill in information and material usage language.

With the display flow, it can be used to display information material and allow users editing of material data which can include multiple materials in an intuitive way while ensuring that the data entry process is carried out accurately and without errors.

#### 2.2 Upload Flow

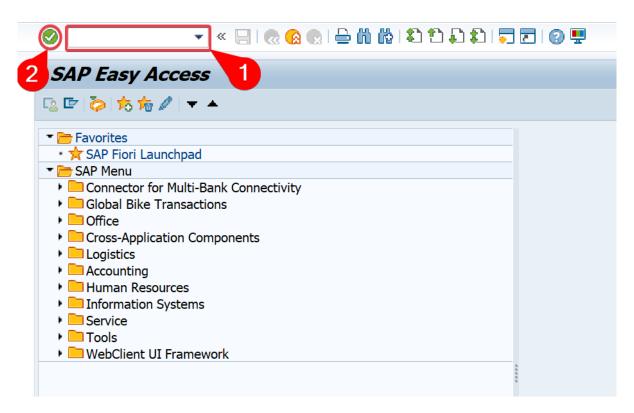

#### 2.2.1 Transaction code

| T-code | Description                     |
|--------|---------------------------------|
| ZMM01  | Material Master Data Management |

### 2.2.2 Detail implementation

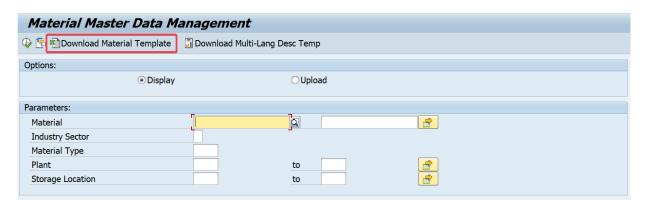

#### 1. 2.2.2.1 Create New Material

"ZMM01" is now entered in the Transaction box

Click Enter

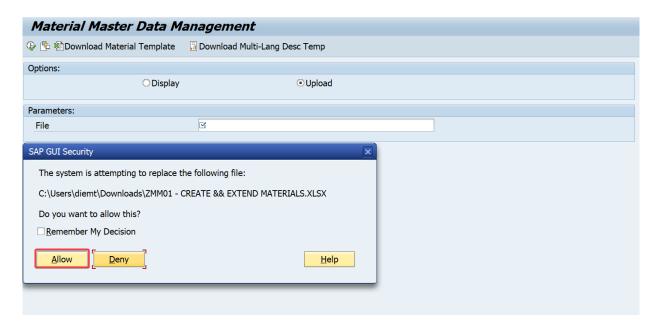

In the Material Master Data Management screen, select "Upload"

Click on "Download Excel Template" Download Excel Template

Click on "Save"

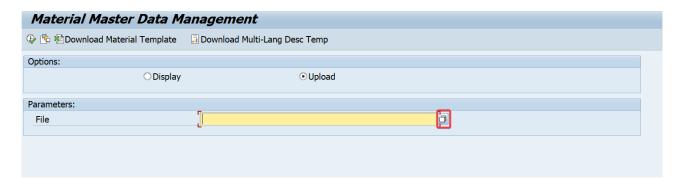

### Click on "Allow"

You will receive a message that says: Download template successfully.

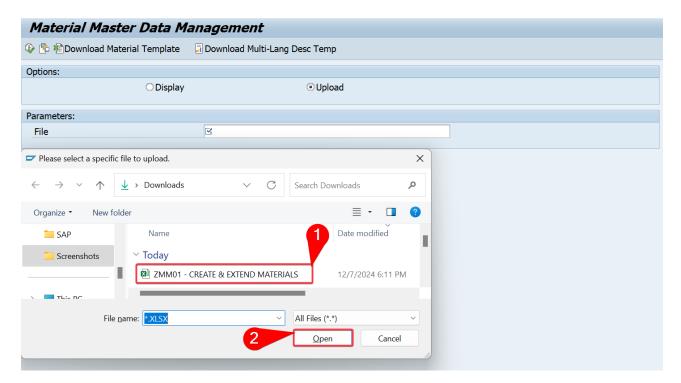

Based on the *Excel Template* from downloaded file locally, enter the following information:

| No. | Field name                  | M/O | Description                                    |
|-----|-----------------------------|-----|------------------------------------------------|
| 1.  | Material Number             | M   | Default: ####### (Alphanumeric)                |
| 2.  | Industry Sector             | M   | Default: E                                     |
| 3.  | Material Type               | M   | Default: HAWA, ZDIE                            |
| 4.  | Plant                       | О   | Default: CT00, FU24, DN00                      |
| 5.  | Storage Location            | О   | Default: CT01, DN01, TG01                      |
| 6.  | Material Description        | M   | Describe material information                  |
| 7.  | Base unit of measure        | M   | The smallest basic unit to calculate           |
| 8.  | Material Group              | M   | Default: PHONE, TABLET, LAPTOP, ZREPAIR        |
| 9.  | General item category group | О   | Default: NORM, LEIS                            |
| 10. | Unit weight                 | M   | Unit of measurement for weight (Trading Goods) |
| 11. | Language Key                | M   | Default: EN                                    |
| 12. | Purchasing Group            | О   | Default: F00                                   |
| 13. | Batch Management            | О   | Default: X                                     |
| 14. | Planned Delivery Time       | О   | Default: Number                                |
| 15. | GR Processing Time          | О   | Default: Number                                |
| 16. | Price Determination         | О   | Default: 2                                     |

| 17. | Valuation Area  | О | Default: CT00, FU24, DN00   |
|-----|-----------------|---|-----------------------------|
| 18. | Valuation Class | 0 | Default: 3100               |
| 19. | Price Control   | 0 | Default: V                  |
| 20. | Price Unit      | О | Default: 1                  |
| 21. | Moving Price    | 0 | Default: 000.000            |
| 22. | Attribute 1     | 0 | Default: Text (Maximum 255) |
| 23. | Attribute n     | 0 | Default: Text (Maximum 255) |

In the "File", click on icon to choose file from local file

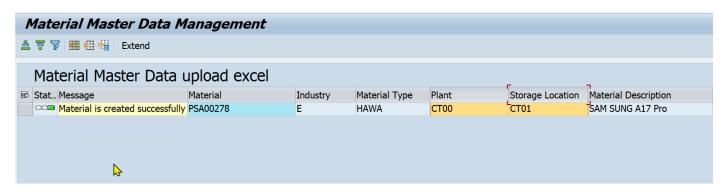

Choose "ZMM01\_CREATE AND EXTEND MATERIAL" file

Click on "Open"

Click on *Execute* icon

You will receive the message that says: Material is created successfully. and display status:

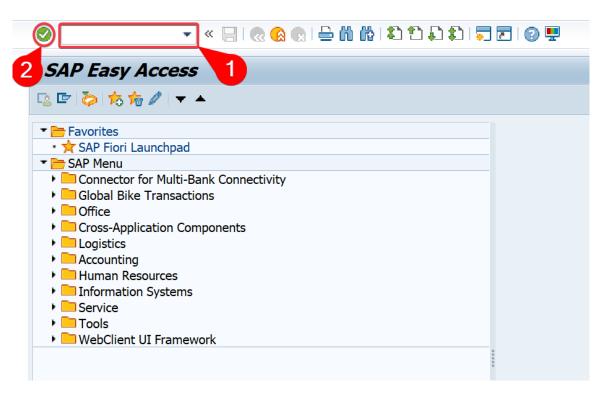

Click on to return

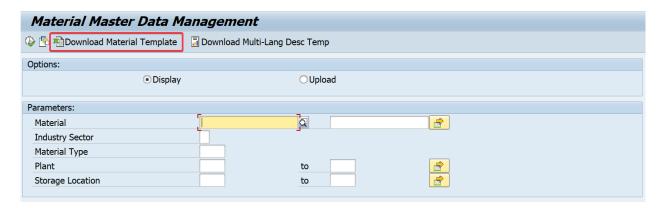

### 2. 2.2.2.2 Extend the Material (Tick "Extend)

In the SAP Easy Access screen, enter the transaction code **ZMM01** 

Press "Execute/Enter"

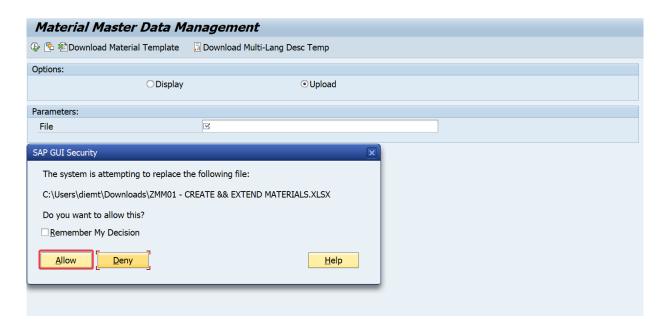

In the Material Master Data Management screen, select "Upload"

Click on the "*Download Excel Template*" button. Download Excel Template

Click on "Save"

## Click on "Allow"

You will receive a message that says: Download template successfully.

In the *Excel file*, fill in the Material number information that you want to *Extend*. Ensure the *Material Number* exists in the system.

| No. | Field name           | M/O | Description and Example                        |
|-----|----------------------|-----|------------------------------------------------|
| 1.  | Material Number      | M   | Already exists in the system. Default: ####### |
| 2.  | Industry sector      | M   | Default: E                                     |
| 3.  | Material type        | M   | Default: HAWA, ZDIE                            |
| 4.  | Plant                | О   | Default: CT00, FU24, DN00.                     |
| 5.  | Storage location     | О   | Default: CT01, DN01, TG01.                     |
| 6.  | Material Description | M   | Describe material information                  |
| 7.  | Base unit of measure | M   | The smallest basic unit to calculate           |
| 8.  | Material Group       | M   | Default: PHONE, TABLET, LAPTOP, ZREPAIR        |
| 9.  | Unit Weight          | M   | Unit of measurement for weight (Trading Goods) |
| 10. | Language Key         | M   | Default: EN                                    |
| 11. | Class Type           | О   | Default: 023                                   |
| 12. | Class                | О   | Default: Z_TECH_BATCH                          |

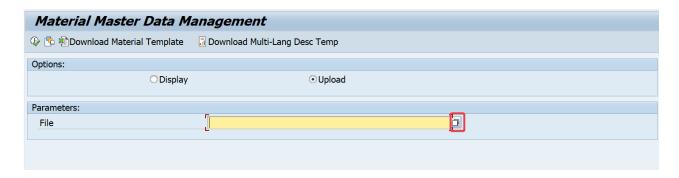

| 13. | Purchasing Group            | 0 | Default: F00                |
|-----|-----------------------------|---|-----------------------------|
| 14. | Batch Management            | 0 | Default:X                   |
| 15. | Price determine             | 0 | Default: 2                  |
| 16. | Valuation Area              | 0 | Default: CT00, FU24, DN00   |
| 17. | Valuation class             | 0 | Default: 3100               |
| 18. | Price control               | 0 | Default: V                  |
| 19. | Price unit                  | 0 | Default: 1                  |
| 20. | Moving Price/Per.Unit Price | 0 | Default: 000.000            |
| 21. | Attribute 1                 | 0 | Default: Text (Maximum 255) |
| 22. | Attribute 2                 | О | Default: Text (Maximum 255) |
| 23. | Attribute 3                 | О | Default: CT00, FU24, DN00   |
| 24. | Extend                      | О | Tick/TRUE                   |

Provide new **Plant**, **Storage Location**, and other relevant details to extend the material to a new organizational level.

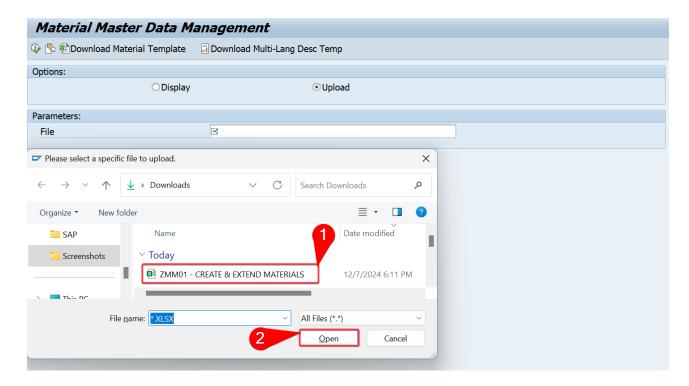

The Extend checkbox should be "*Tick*" or enter "*TRUE*" in the Excel file.

After checking and making sure that all data fields in the Excel file are valid.

Return to the Material Master Data Management screen, select "Upload"

In the "File", click on icon to choose file from local file.

Choose "ZMM01\_CREATE AND EXTEND MATERIAL" file

Click on "Open"

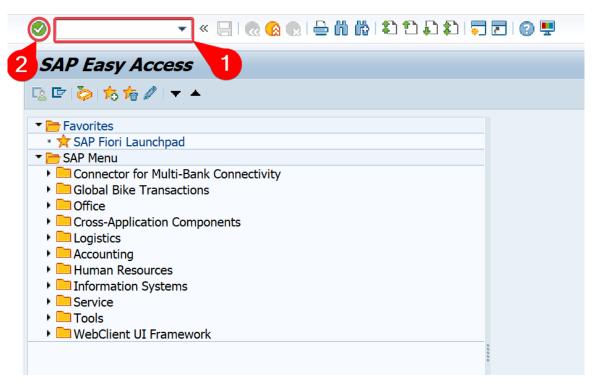

Click "Execute (F8)" to extend the material.

You will receive a message that says: Extend material successfully. and the status column will turn green:

Click on to return to the SAP Easy Access screen.

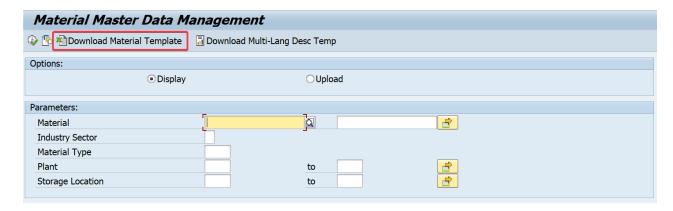

## 3. 2.2.2.3 Extend Material (Not Tick "Extend)

"ZMM01" is now entered in the Transaction box

Click Enter

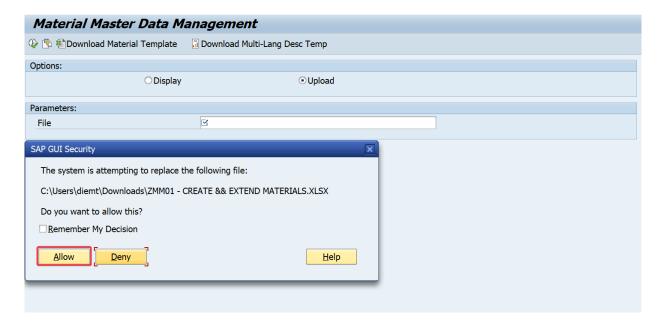

In the Material Master Data Management screen, select "Upload"

Click on the "**Download Excel Template**" button. Download Excel Template

Click on "Save"

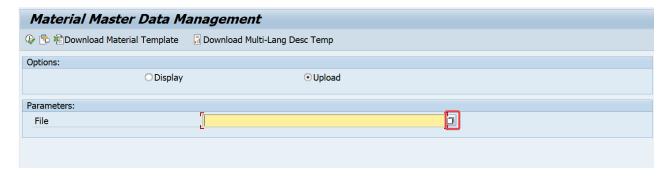

### Click on "Allow"

You will receive a message that says: Download template successfully.

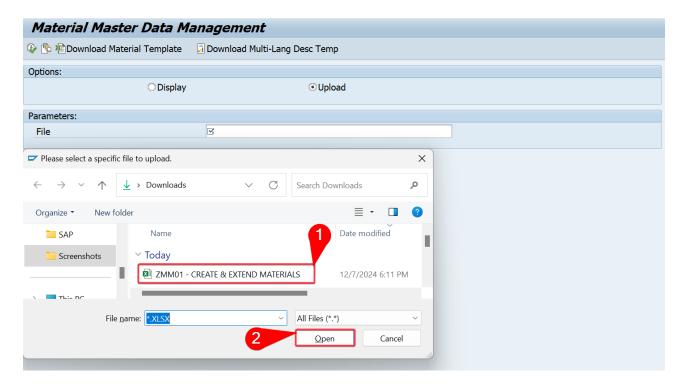

Based on the Excel Template from downloaded file locally, enter the following information:

| No. | Field name                  | M/O | Description and Example                               |
|-----|-----------------------------|-----|-------------------------------------------------------|

- For **Create New Material:** Material is created successfully. and the status column will turn green:

- For Extend Material: Extend material successfully. and the status column will turn green:

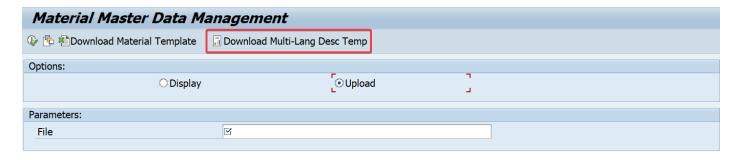

Click on do return to the SAP Easy Access screen.

## 5. 2.2.2.5 Create Material Description for Multi-language

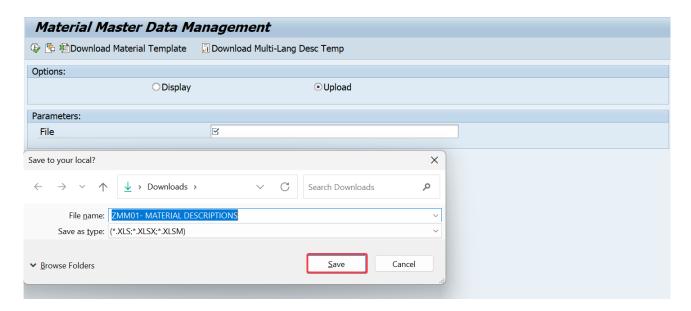

In the SAP Easy Access screen, enter the transaction code **ZMM01** and press **Enter** 

In the Material Master Data Management screen, select "Upload"

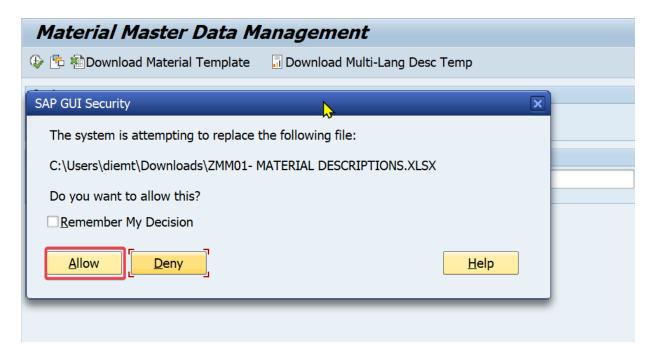

Click on the "Download Multi-Lang Desc Temp" button Download Multi-Lang Desc Temp

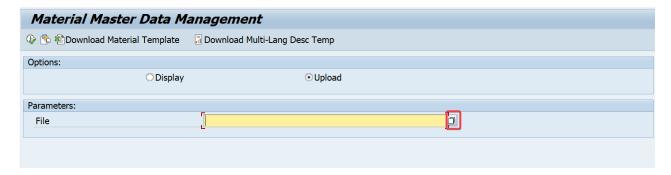

Click "ZMM01-MATERIAL DESCRIPTIONS" file

Click on "Save"

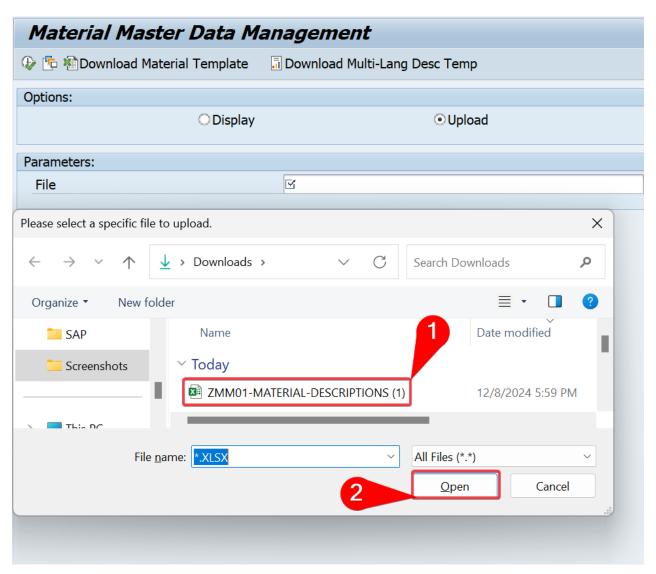

Click on "Allow"

You will receive a message that says: Download template successfully.

In file screen, click

Choose "ZMM01-MATERIAL-DESCRIPTION" file

Click on "Open"

Click on "Execute"

You will receive a message that says: Material Descriptions is created successfully with status green with status green

Click on to return to the SAP Easy Access screen

#### 2.3 Display Flow

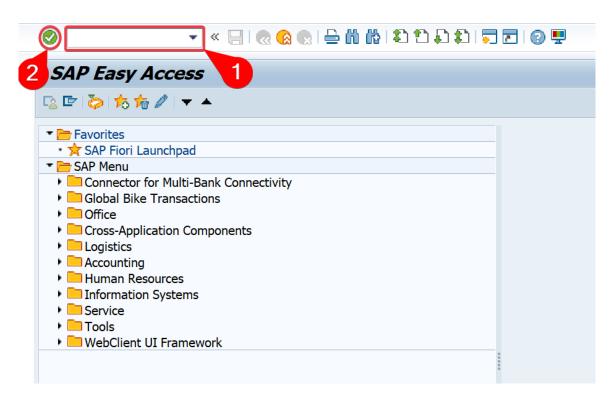

#### 2.3.1 Transaction code

| T-code | Description                     |
|--------|---------------------------------|
| ZMM01  | Material Master Data Management |

## 2.3.2 Detail implementation

## 6. 2.3.2.1 Display ALV

Enter T-code "ZMM01" into the Transaction box.

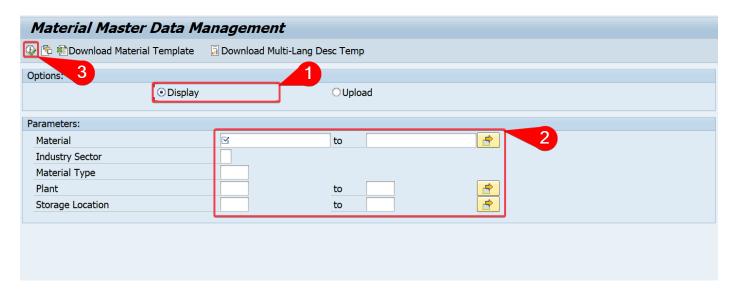

Click on "Execute"

Press "Enter"

In the Material Master Data Management screen, select "Display"

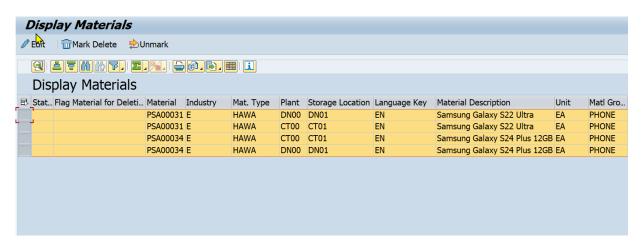

In the *Parameters* screen, if you want to be specific and limit the *Material and Plant*, you can enter the full information of the parameters

| Field            | M/O | Data Value                |    | Data Value                |
|------------------|-----|---------------------------|----|---------------------------|
| Material         | M   | ####### (PSA00031)        | to | ####### (PSA00034)        |
| Industry Sector  | О   | Default: E                |    |                           |
| Material Type    | О   | Default:HAWA, ZDIE        |    |                           |
| Plant            | О   | Default: CT00, DN00, FU24 | to | Default: CT00, DN00, FU24 |
| Storage Location | О   | Default: CT01, TG01, DN01 | to | Default: CT01, TG01, DN01 |

Click "Execute"

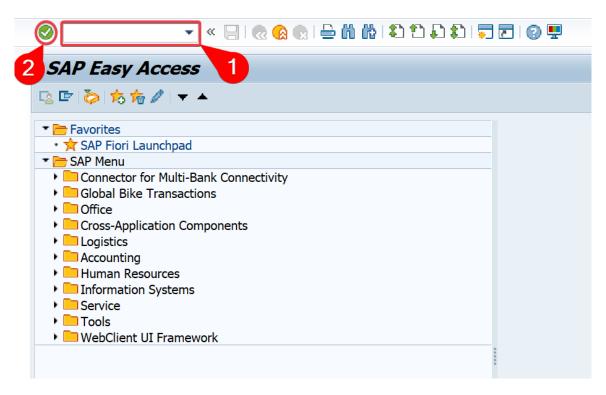

In Display Materials screen, the system displays material information

Click on to return to the *Display screen*.

#### 7. 2.3.2.2 Delete line Material data

Enter T-code "ZMM01" into the Transaction box

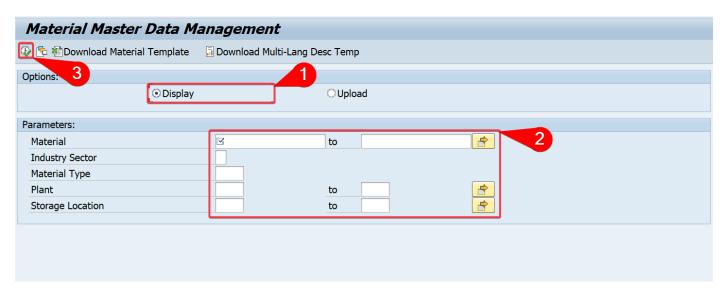

Click Execute (Enter)

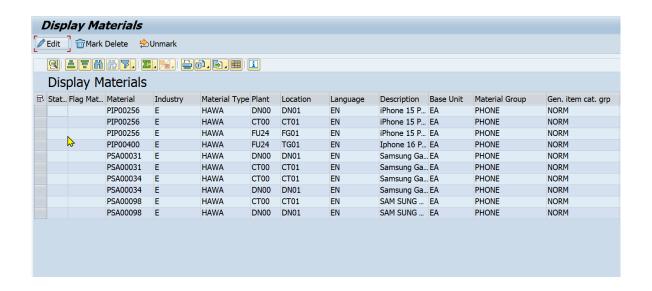

In the Material Master Data Management screen, select "Display"

In the *Parameters*, enter the following informations:

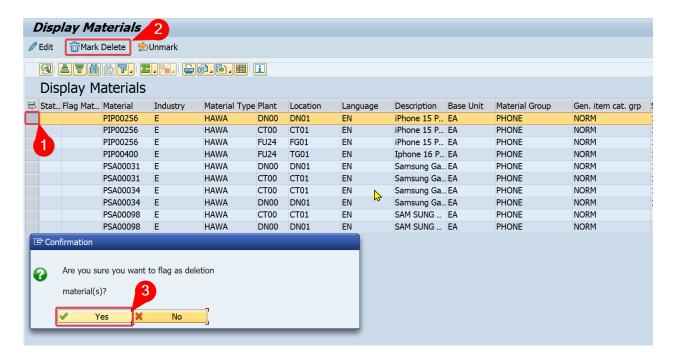

| Field            | M/O | Data Value                |    | Data Value                   |
|------------------|-----|---------------------------|----|------------------------------|
| Material (M)     | M   | ####### (PIP00256)        | to | ####### (PSA00098)           |
| Industry Sector  | О   | Default: E                |    |                              |
| Material Type    | О   | Default: HAWA, ZDIE       |    |                              |
| Plant            | O   | Default: CT00, DN00, FU24 | to | Default: CT00, DN00,<br>FU24 |
| Storage Location | O   | Default: CT01, DN01, TG01 | to | Default: CT01, DN01,<br>TG01 |

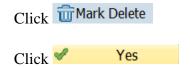

Click Execute

If delete one Material, select one line Material data to Mark Delete.

Select line Material: PIP00256 - Plant: DN00.

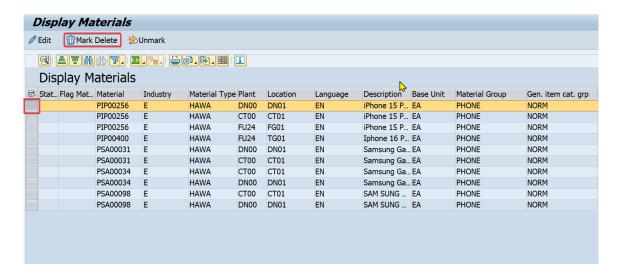

You will receive message that says:

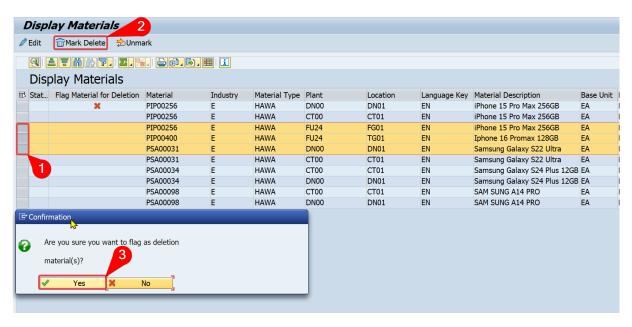

The result is status displays green square and marked with in the Flag for Delete Material column.

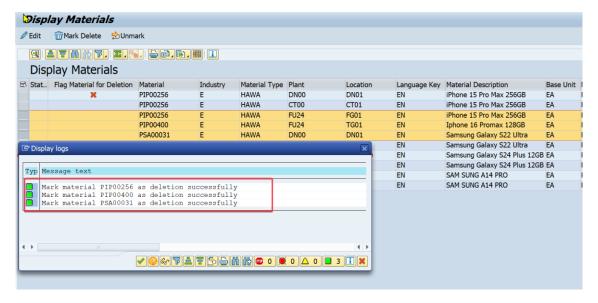

If you want to delete *multiple lines Material*, you need to select *multiple lines Material data to Mark Delete*. Hold "*Ctrl*" to select line *Material: PIP00256 - Plant FU24* and line *Material: PSA00031 - Plant: DN00* 

You receive the message that says:

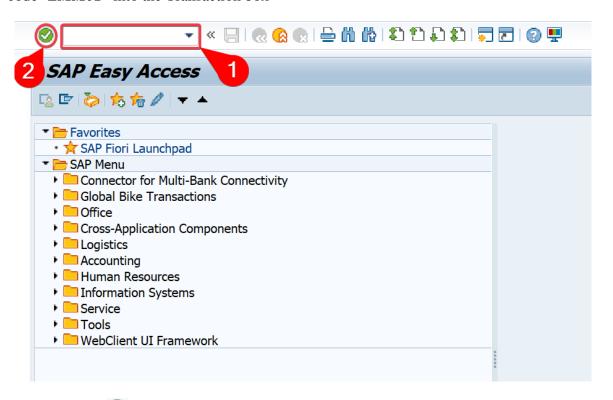

The result is status displays green square and marked with in the Flag for Delete Material column

Click on to return Display screen

Click on to return to the SAP Easy Access screen.

#### 8. 2.3.2.3 Undelete line Material data

Enter T-code "ZMM01" into the Transaction box

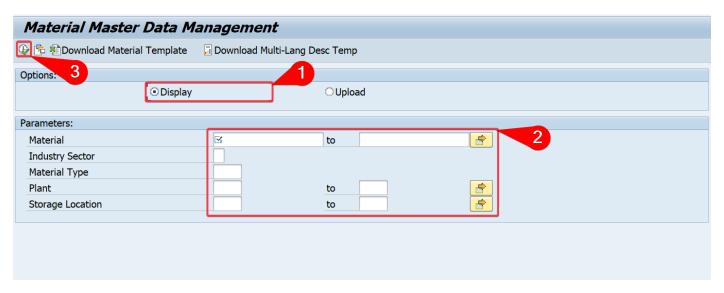

Click Execute (Enter)

In the Material Master Data Management screen, select "Display"

In the *Parameters*, enter the following informations:

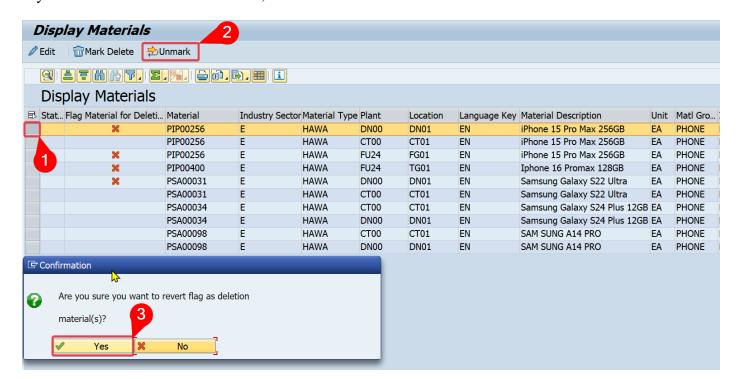

| Field           | M/O | Data Value          |    | Data Value         |
|-----------------|-----|---------------------|----|--------------------|
| Material        | M   | ####### (PIP00256)  | to | ####### (PSA00098) |
| Industry Sector | О   | Default: E          |    |                    |
| Material Type   | О   | Default: HAWA, ZDIE |    |                    |

| Plant            | О | Default: CT00, DN00, FU24 | to | Default: CT00, DN00, FU24 |
|------------------|---|---------------------------|----|---------------------------|
| Storage Location | О | Default:CT01, TG01, DN01  | to | Default:CT01, TG01, DN01  |

Click Execute

If you want to *Undelete one Material*, select one line *Material data to Unmark*.

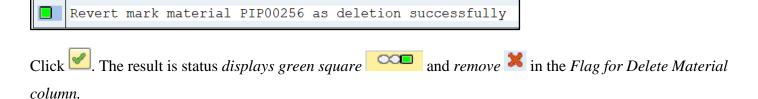

Select line Material: PIP00256 - Plant: DN00.

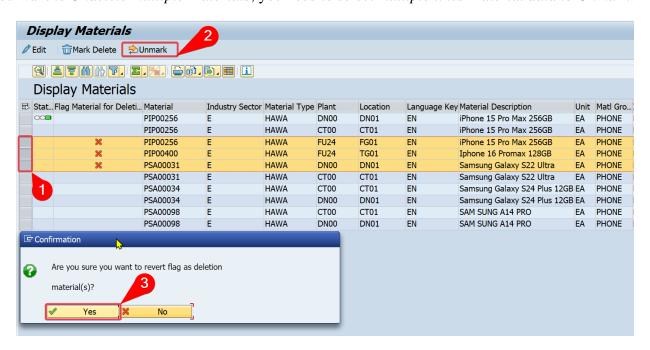

User ManualFPT Software Co., LtdCreated by ??

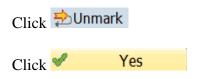

You will receive the message that says:

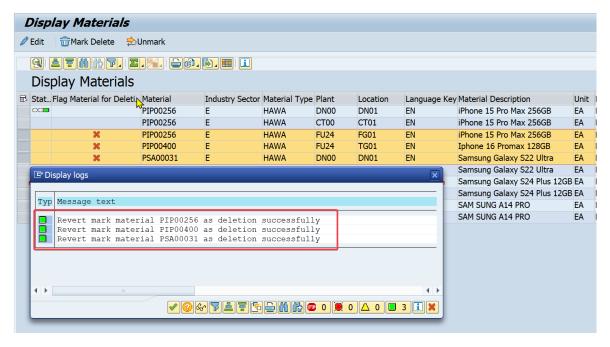

If you want to *Undelete multiple Materials*, you need to select *multiple lines Material data to Unmark*.

Hold "Ctrl" to select line Material: PIP000256 - Plant FU24 and line Material: PSA00031 - Plant: DN00

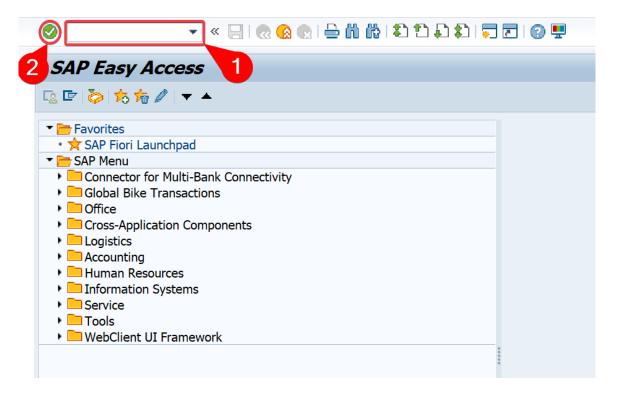

You will receive the message that says:

Click . The result is status displays green square and remove in the Flag Delete Material column

Click on to return *Display screen* and can click on to return to the *SAP Easy Access screen*.

#### 9. 2.3.2.4 No edit data

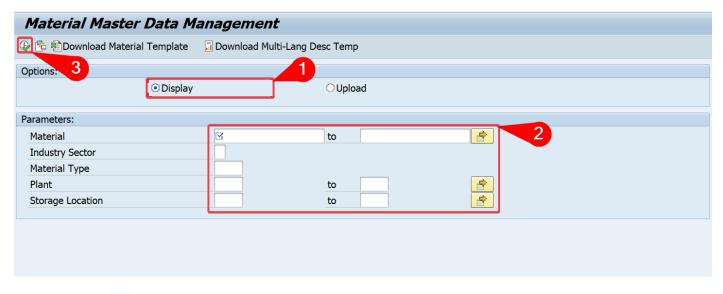

# Click *Execute (Enter)* or press Enter

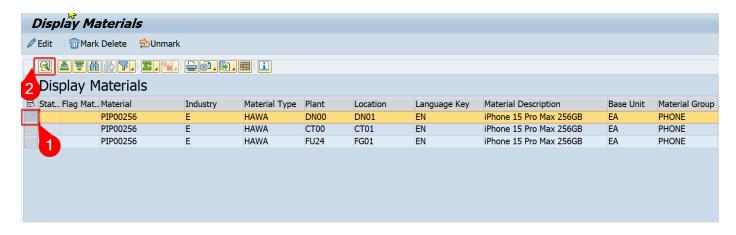

In the Material Master Data Management screen, select "Display"

In the *Parameters*, enter the informations:

| Field            | M/O | Data value                   |    | Data value                |
|------------------|-----|------------------------------|----|---------------------------|
| Material         | M   | ####### (PIP00256)           | to | ####### (PSA00098)        |
| Industry Sector  | O   | Default: E                   |    |                           |
| Material Type    | O   | Default: HAWA, ZDIE          |    |                           |
| Plant            | O   | Default: CT00, DN00,<br>FU24 | to | Default: CT00, DN00, FU24 |
| Storage Location | O   | Default: CT0, TG01, DN01     | to | Default: CT0, TG01, DN01  |

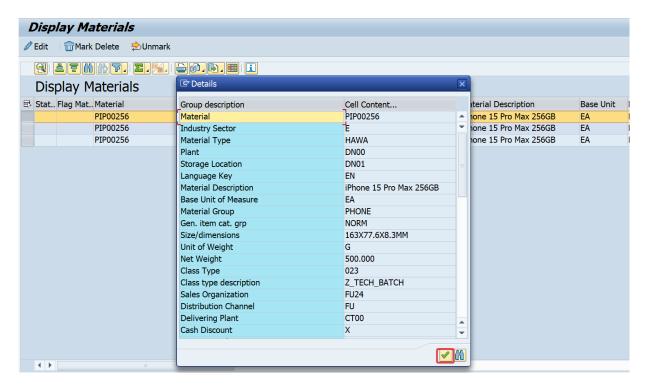

Click *Execute* to show *Display Materials* screen

Select line Material: PIP00256 - Plant: CT00.

Click to show data details.

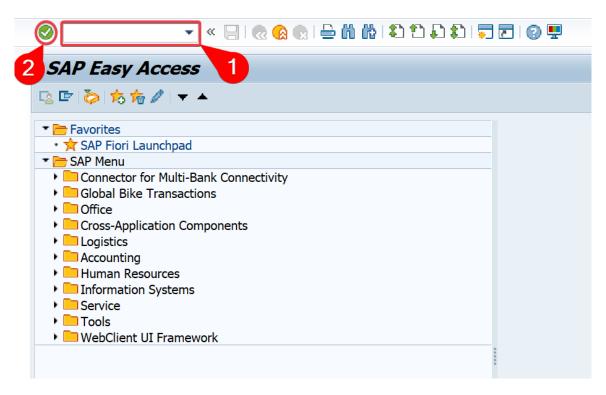

Click on to return Display screen

Click on to return to the SAP Easy Access screen.

#### 10. 2.3.2.5 Edit 1 line Material with 1 field

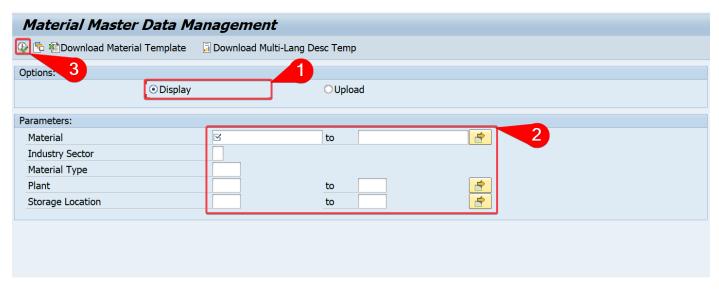

Click Execute (Enter)

In the Material Master Data Management screen, select "Display"

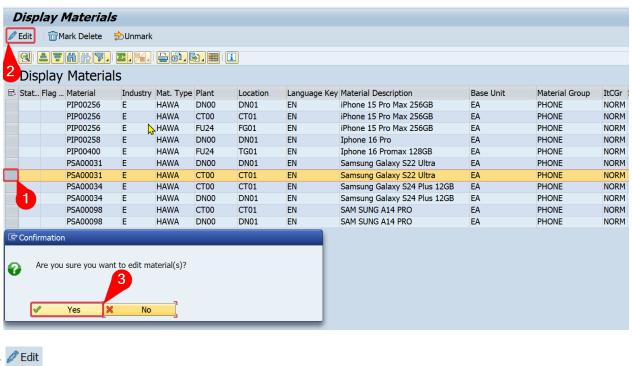

In the *Parameters screen*, enter the following information:

| Field            | M/O | Data Value                |    | Data Value                |
|------------------|-----|---------------------------|----|---------------------------|
| Material         | M   | ####### (PIP00256)        | to | ####### (PSA00098)        |
| Industry Sector  | О   | Default: E                |    |                           |
| Material Type    | О   | Default: HAWA, ZDIE       |    |                           |
| Plant            | О   | Default: CT00, FU24, DN00 | to | Default: CT00, FU24, DN00 |
| Storage Location | О   | Default: CT01, TG01, DN01 | to | Default: CT01, TG01, DN01 |

Click Execute

Select line Material: PSA00031 - Plant: CT00

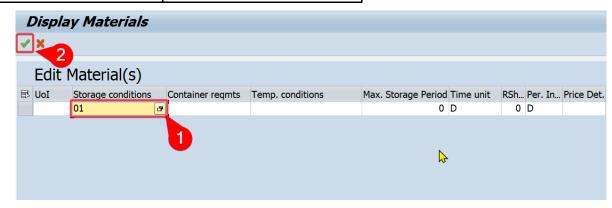

Click Edit

Click Yes

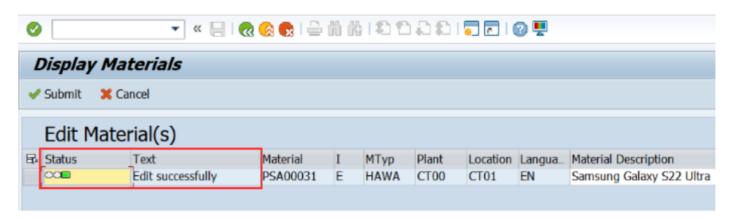

Edit field Time Unit

| Field              | Description |
|--------------------|-------------|
| Storage Conditions | 01          |

The result displays Message text | Edit successfully and status shows |

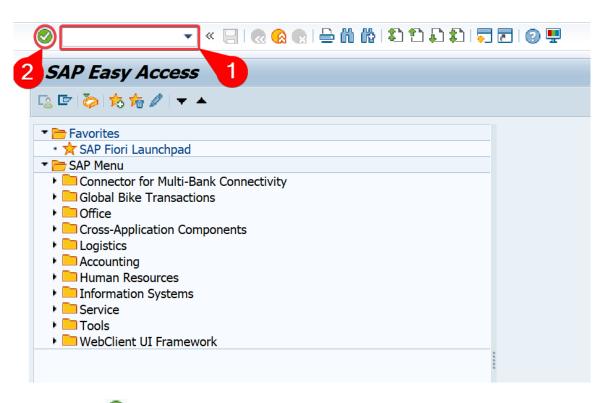

Click to go back to the *Display Materials screen*.

Click on to return Display screen

Click on to return to the SAP Easy Access screen.

# 11. 2.3.2.6 Edit 1 line Material with multiple fields

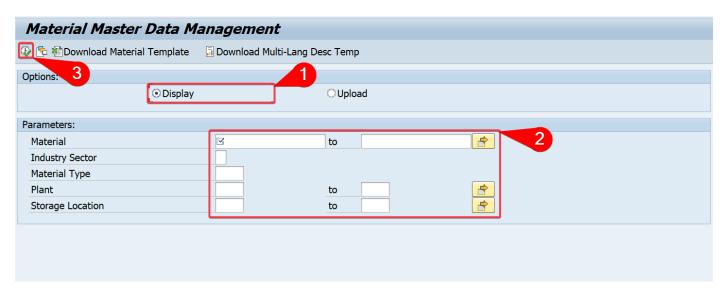

Click Execute (Enter)

In the Material Master Data Management screen, select "Display"

In the *Parameters screen*, enter the following information:

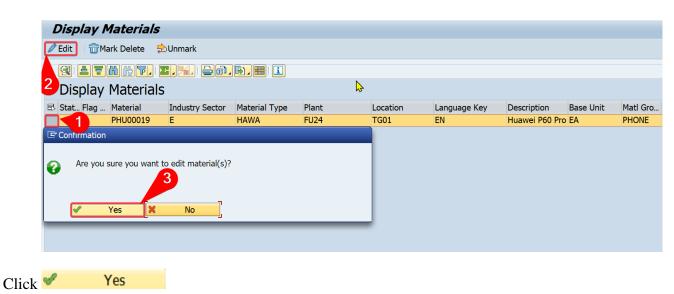

| Field            | M/O | Data Value                |    | Data Value                |
|------------------|-----|---------------------------|----|---------------------------|
